

Round Bale Feeders

The R 6' x 6' hay feeder is designed to feed both round and square bales. The hay is never out of reach for animals large or small. Most hay that is pulled out falls under the feeder and is cleaned up rather than being tramped on. One end of the feeder opens allowing placement of the bale in the feeder with a Weldy bale mover (RBM1S) with a three point hitch. This eliminates the need of special equipment.

The feeder is made of 1 1/4" O.D. 13 gauge tubing. The skids are 1 3/4" O.D. 13 gauge tubing. The latch on the removable end has no loose parts.

A 6 x 6 calf feeder of the same design but with shorter legs thus a closer ground to bottom of feeder distance is also available.

R6X6C - 6 x 6 cattle feeder
