

Fence Line Bunk Feeders

Fence line bunks form a division between the feed lot and feeding area. This allows feed to be placed in the bunk without entering the lot or dumping it over a fence. The bunk side toward the cattle is closed preventing a buildup under feed bunk. Cattle restraining bars are welded to the bunk on the cattle side forming a fence. This prevents cattle from stepping or falling into bunk in addition to minimizing feed waste. Fence line bunk can be ordered in any length. They are normally made up in 10' or 12' lengths bolted together.

Specifications Chart

Width	Bunk Side Depth	Bunk Center Depth	Overall Width	Bunk Height	Overall Height	Length	Gage	Weight
2'	6"	10"	24"	18"	48"	*	14	23 lbs. per ft
2	6	10	24	24	55	*	13	24
3	8	12	36	24	55	*	13	36
4	8	15	46	28	59	*	13	42
4D	14	21	46	28	59	*	13	46
5	8	18	60	28	59	*	13	47
5D	14	24	60	28	59	*	13	51

*Length ordered normally made up in 10' or 12' lengths to be bolted together.
